# Two Large Gold-Copper-Porphyry Systems in Kazakhstan

## BESKAUGA DEPOSIT – The Largest Undeveloped Copper-Gold Project in Kazakhstan

- **BESKAUGA-MAIN** A Standout Copper-Gold Deposit Due to Excellent Infrastructure
- Currently In Pre-Feasibility Study
- JORC Combined Resources: 590 million tonnes containing
   3.34 million t of Copper Equiv or 15.7 million Oz of gold Equiv
- Potential for Order of Magnitude Larger Resource
- ➤ <u>BESKAUGA-SOUTH</u> A Gold Deposit With Low-Cost Gold Recovery Through Gravity Separation

## **COPPERBELT & DOSTYK STRUCTURE**

# COPPERBELT AG

www.copperbeltlimited.com

#### **Management:**

#### Dr Waldemar Mueller, M.Sc, PhD (Geology), M.AusIMM Chairman & Managing Director

Dr. Waldemar Mueller has over 40 years experience in exploration and valuation of mineral resources. The last 20 years he has worked on various leadership positions with mineral exploration companies in Germany (projects in Brazil & Kazakhstan), in Canada (projects in Russia & Kazakhstan), in Australia (projects in Kyrgyzstan, Georgia & Kazakhstan).

Dr Mueller has strong background in gold and base metals deposits of Kazakhstan and Kyrgyzstan, he has visited and examined different mineral deposits worldwide through his consulting firm Kiintas Mining Management Ltd. Dr Mueller is a Competent Person as defined in JORC Code.

#### Dr. Georg H. Schnura, Director

Dr. George H. Schnura, after many years in banking, has worked as consultant for renown international companies and has advised governments in emerging economies on structural and macro economical reforms. He has been Board member in different public companies, mainly in Spain. He has a worldwide network in the business and political community.

#### Peter Goeggel, LIC. IUR. Advokat, LL.M., Director

Mr. Peter Goeggel is a partner of NEOVIUS Schlager & Partner in Basel, Switzerland and practices as a lawyer with specialization in international economic law. He has ample experience in holding structures with exploration companies as subsidiaries. He accomplishes corporate actions, coordinates prospectus procedures and supports companies with their IPO. He is monitoring the legal work of the subsidiaries in connection with the exploration licenses and maintains contact with the executive directors of the subsidiaries.

#### Yurijs Gorbovs, Director

Has worked in leadership positions for development and building of multifunctional infrastructures (Riga/Latvia) hotels (Tbilisi/Georgia) also developed and managed internationally real estate projects.

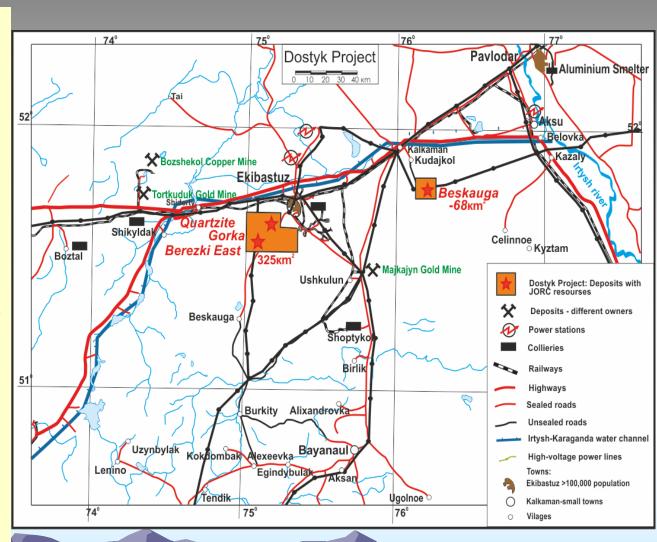

## **DOSYK LLP**

- Dostyk is a 100% Subsidiary of Copperbelt AG/Switzerland
- Dostyk is a Licence Holder of Maykubinsk Exploration & Mining Licence, located in Paylodar Province of Kazakhstan close to Russia and China Boarders

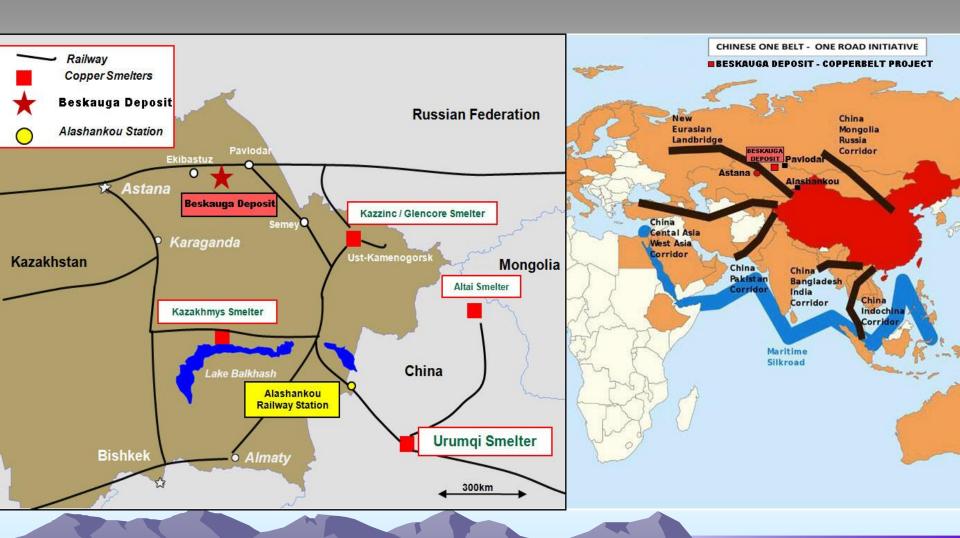

# DOSTYK PROJECT EXCELLENT INFRASTRUCTURE

- Located in a Mining and Industrial Region of Kazakhstan.
- Ekibastuz (within 80km) is a city of ~150,000, Capital Astana only 300 km away.
- Four large power stations produce 40% of Country power (low cost).
- ☐ 1,150kV power line crossing the Beskauga Deposit, nearest sub-station 13km away
- ☐ Irtysh-Karaganda Water Canal (250,000m3/h) running 16km from Beskauga Deposit
- Railway station 19km away, sealed roads, good communication, mining labour & services.
- Close to Bozshakol Copper-Porphyry Mine

# China's One Belt – One Road Initiative Beskauga Deposit: Railway Connections to Copper Smelters in Kazakhstan, China & Russia

# **Dostyk Project**

Exceptional Topography, No Settlements, No Agriculture)

low cost exploration

# **DOSTYK PROJECT**

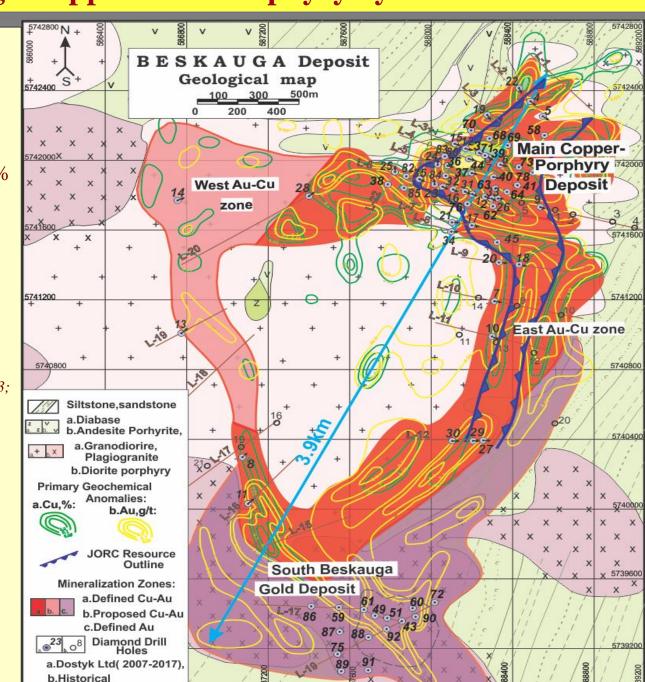

## **EXCELLENT (LOW COST) INFRASTRUCTURE**

### Beskauga Copper-Gold Porphyry System

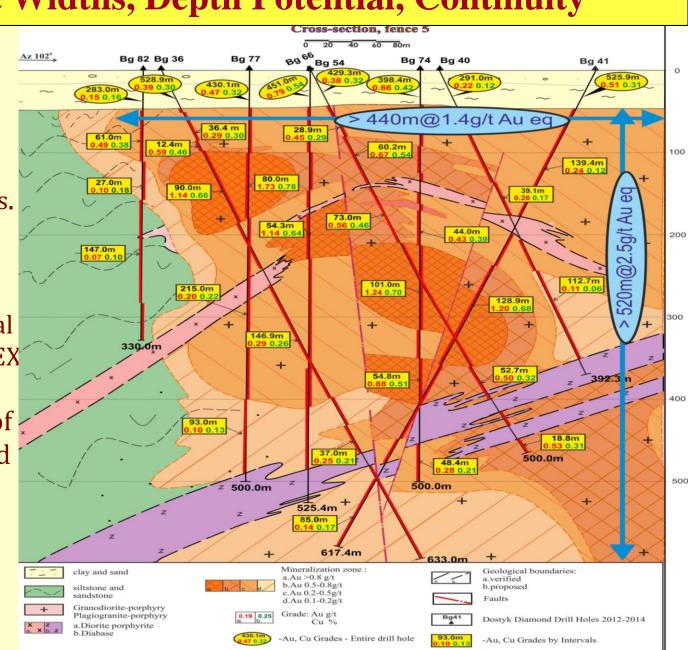

#### **Beskauga-Main Deposit**

- Beskauga is a classic gold-rich Copper-Porphyry System
- Beskauga is the largest of four explored deposits on license (92% of the combined Licence resources).
- □ 94 Diamond drillholes=50,000m · 47,000 Core samples
- □ 2,800 Geochemical drillholes =110,000m,
  - 9,000 Geochemical samples from hard rocks
- □ DDHs topographic survey:
- High-precise 12 channels GPS Trimble R3;
- Shallow bedrock drilling has confirmed gold & copper mineralization over 8 sq km.
- □ Main area of mineralization is 4km by 1km; it is Au-Cu rich in the north and gold-rich in the south (South Beskauga Gold Deposit). Less than 50% of the main zone drilled to date.
- □ JORC Compliant Resources at Au cut-off 0.2g/t: 15.7Moz Au equiv or 3.34Mt Cu equiv.

# Beskauga Main Deposit Significant Widths, Depth Potential, Continuity

- Continuity of mineralization has been confirmed by diamond drilling at greed 50 x 50 meters.
- Bulk high-grade SEplunging shoot highlighting potential fast payback of CAPEX
- Impressive width of 440m at 1.4g/t gold equiv. with over 500m in depth direction at 2.5g/t gold equiv.

## Beskauga-Main Resources, Gold Cut-Off 0.20g/t

#### **Beskauga Main & Beskauga South Deposits**

#### **Metallurgical Testworks Successful in Obtaining Good Recoveries & Grades**

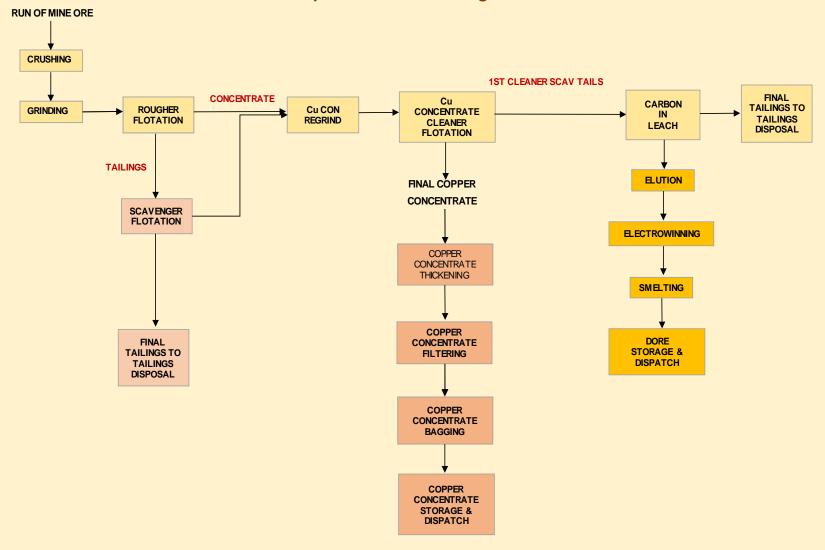

(Wardell Armstrong International/UK, Testworks update Jun 2016)

Ore Type		Copper-Gold Ore (Beskauga Main)				
	Cu, %	Au, g/t	Ag, g/t	Mo, %		
Head Assay	0.30	0.43	1.21	0.003		
Flotation Concentrate	Recovery 82.66% Grade 22%Cu	Recovery 56.65% (63% adding CIL Circuit) Grade 23.0/g/t Au in Con + 0.3g/t as Dore	Recovery 60.0% Grade 37.8g/t Ag	Saleable concentrate not achieved		

Ore Type		Gold Ore (Beskauga South)		
	Cu, %	Au, g/t	Ag, g/t	Mo, %
Head Assay	0.01	1.13	<0.5	-
Gravity & Flotation Concentrate	-	Recovery 84% Grade 64g/t Au	-	-

- <u>Beskauga Main.</u> Metallurgical tests conducted on three samples representing a 500m-deep open pit. Testworks obtained a commercial copper concentrate with gold and silver credits. Adding CIL circuit to treat 1<sup>st</sup> Cleaner scav. tails would increase gold recovery from 56.65% to 63%.
- Beskauga South. Gravity separation has recovered 62% of the gold into a concentrate assaying 64g/tAu. Flotation of the gravity tail added 22% gold for a total combined gold recovery 84%.

#### **HYDROGEOLOGICAL & GEOTECHNICAL FEATURES**

- Climatic conditions: small atmospheric precipitation mostly in autumn-winter periods and high water evaporability resulted in a poor feeding of the underground water.
- Permanently active water which could complicate mining are absent in the deposit area.
- The ore body is seated under 20 to 45m thick Cenozoic sands and clays.
- The ore-hosting rocks are poorly fissured and stable in the open pit walls. Stability of open pit walls:
  - Slope angle of a pit in host rocks shall be at most 76°. A bench height under these conditions may be unrestricted.
  - Stability of Dumps: Bed-rocks: bench height at most 20-25m; Slope angle 30-35°.

For sand-and-clay rocks: bench height at most 10-15 m; Angle of slope = 35-40°.

- A water content of the bed rocks is quite poor owing to a low fissuring of the rocks and absence of large regional-scale faults in the deposit area
- The Underground water of the overburden is weakly saline and suitable for use for ore processing.
- The water inflows into open pit from overburden is expected at 243 m³/hour
- The quantity of the water from mine dewatering (mine drainage) operations may fully satisfy the need of the mining and processing for water and may also meet requirements for drinking water.

### Beskauga-Main Deposit - Pit optimisation (conceptual)

- Au Cut-off 0.2 g/t, Depth restriction 500m, CAPEX not considered

### **Beskauga-South Gold Deposit**

(Only 1.5km Away from Beskauga Copper-Porphyry Deposit)

- Bulk Gold mineralization at size 940 by 730 meters has been outlined by shallow RClike KGK drilling.
- Diamond drill holes have intersected massive intervals of up to 100 meters at over 1.0g/t gold, including 13m to 40m grading 2.4 to 5.7g/t. The mineralization remains open on flanks and below depth 300m.

#### **□ JORC Inferred Resources:**

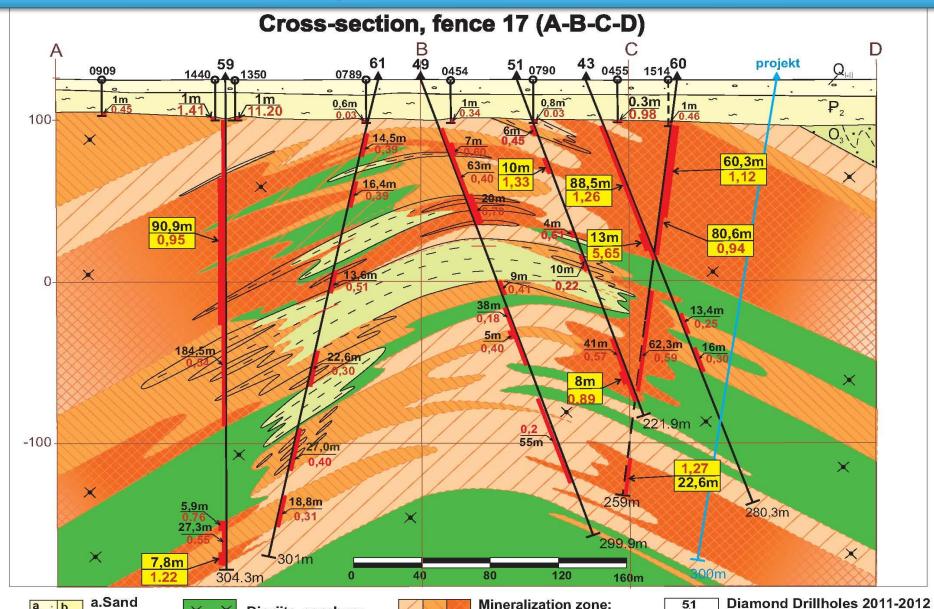

- Cut-off 0.3g/t Au:
- 23.7Mt @ 0.76g/t Au for 580,744oz Au (18.7t)
- Cut-off 0.5g/t:
- 12.5Mt @ 1.10g/t Au for 440,700oz Au
- Cut-off 0.6g/t:
- 10.1Mt @ 1.23g/t Au for 398,000 oz

Metallurgical Testworks Obtained Impressive Gold Recovery:
 Gravity Separation (GRG) followed by Flotation of gravity tailings and CIP has obtained a Combined Gold Recovery of 83.3% (further details in separate presentation)

#### **Beskauga-South Gold Deposit**

### Beskauga Deposit -Great Potential

**Geochemical & Geophysical Anomalies Indicate Large-Scale System** 

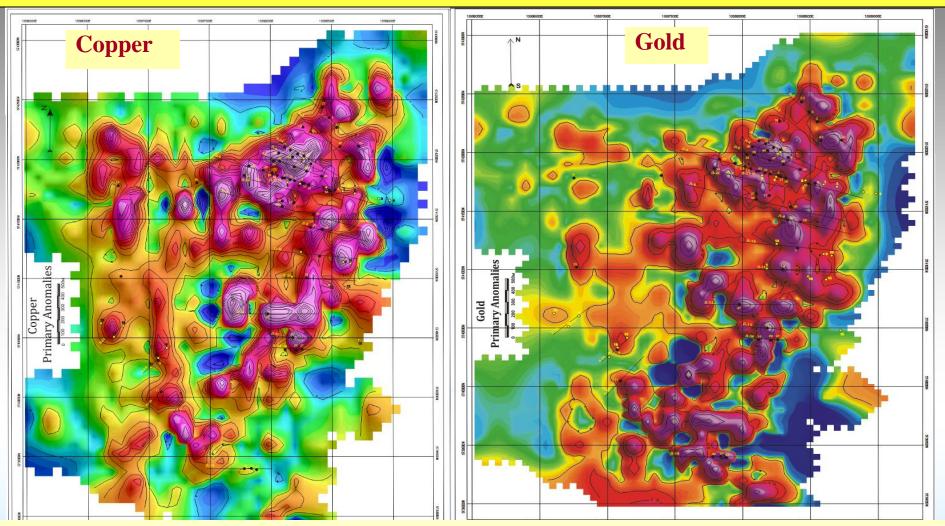

#### Geochemical & Geophysical Anomalies Indicate Significant Exploration Potential

- Highly-Prospective IP anomaly discovered east of known resources, could double the resources of Beskauga.
- The anomalies of Chargeability indicates potential for large-scale copper-porphyry system with a size 4 by 4km, apparently combining three large mineralization zones.
- Exploration potential:1 to 3Bt copper-gold mineralization.

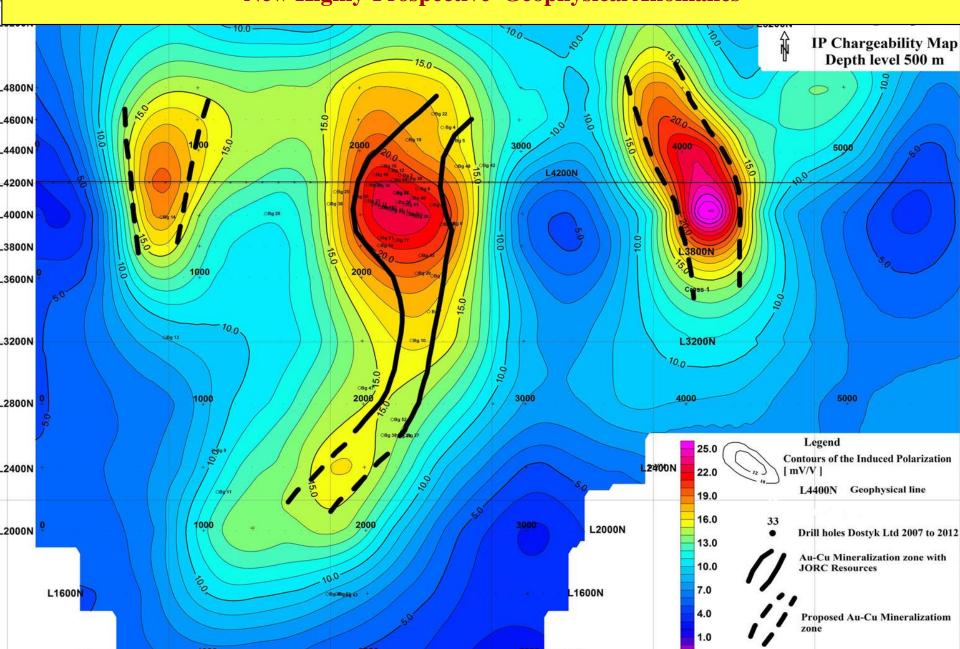

## **Beskauga Deposit**

### **Large Geochemical Anomalies - Potential For New Discoveries**

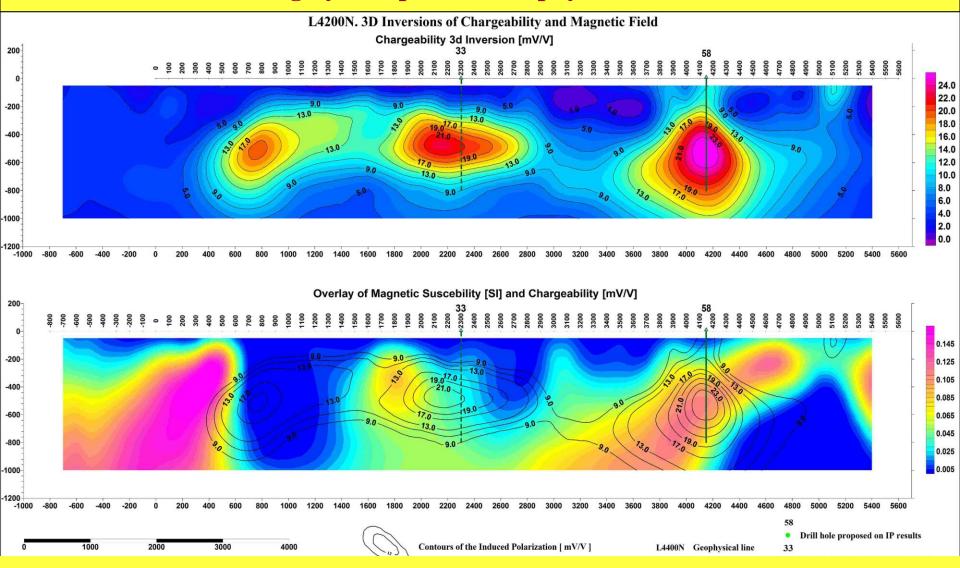

Primary copper & gold anomalies have been obtained with shallow RC drilling through water-transported core

Beskauga Deposit
New Highly-Prospective Geophysical Anomalies

## Beskauga Deposit

**New Highly-Prospective Geophysical Anomalies** 

□ The anomalies of chargeability indicate potential of large-scale copper-porphyry system by size 4x4km.
 □ The central IP Anomaly has been proved by Copper-Gold Resources.
